IN THE CLAIMS

Please amend the claims as follows:

Claim 1 (Currently Amended): A process, which comprises:

alkoxylating a monool with at least one alkoxylating agent to obtain a polyoxyalkylene alcohol comprising 1 to 5 alkoxy units in the presence of a catalyst which comprises a metallo-organic framework material of metal ions and at least bidentate coordinately bound organic ligands.

Claim 2 (Previously Presented): The process according to claim 1, wherein the metal ion is selected from the group consisting of any one elements of Groups 1 to 18, and combinations thereof of the periodic table of the elements.

Claim 3 (Previously Presented): The process according to claim 1, wherein the bidentate organic ligand is selected from the group consisting of a substituted aromatic mononuclear polycarboxylic acid, an unsubstituted aromatic mononuclear polycarboxylic acid, a substituted polynuclear aromatic polycarboxylic acid, an unsubstituted polynuclear aromatic polycarboxylic acid, a substituted aromatic mononuclear polycarboxylic acid comprising at least one heteroatom, an unsubstituted aromatic mononuclear polycarboxylic acid comprising at least one heteroatom, a substituted aromatic polynuclear polycarboxylic acid comprising at least one heteroatom, an unsubstituted aromatic polynuclear polycarboxylic acid comprising at least one heteroatom, an unsubstituted aromatic polynuclear polycarboxylic acid comprising at least one heteroatom, and combinations thereof.

Claim 4 (Previously Presented): The process according to claim 3, wherein the bidentate organic ligand is terephthalic acid or a derivative thereof.

Claim 5 (Original): The process according to claim 1, wherein the metallo-organic framework material exhibits a specific surface area, as determined via adsorption, of > 20 m²/g.

Claim 6 (Currently Amended): The process according to claim 1, wherein the alkoxylation agent is selected from the group consisting of a monofunctional epoxide having 2 to 30 carbon atoms, a multifunctional epoxide epoxides having 2 to 30 carbon atoms, and mixtures thereof.

Claim 7 (Previously Presented): The process according to claim 6, wherein the epoxide is selected from the group consisting of ethylene oxide, propylene oxide, a butylene oxide, and mixtures thereof.

Claim 8 (Cancelled).

Claim 9 (Withdrawn): A method of using an alcohol obtained by the process as claimed in claim 1, which comprises:

preparing a tenside, a flotation oil, a lubricating liquid, a hydraulic fluid, a carrier liquid or in-a polyurethane foam comprising the alcohol.

Claim 10 (Withdrawn): The method of using according to claim 9 where the alcohol is selected from monools of linear and branched alkyl groups having 1 to 30 carbon atoms, which alkyl groups may carry one or more aryl substituents, of homo- and polynuclear aromatic groups having 4 to 30 carbon atoms, which aromatic groups may carry one or more

Ápplication No. 10/611,863 Reply to Office Action of December 9, 2004

alkyl substituents, and of linear and branched alkenyl groups having 2 to 30 carbon atoms and which alkenyl groups may carry one or more aryl substituents.
